

FALCON VISION FUND

PRE-IPO: AI • DEFENSE • ROBOTICS • SPACE

EXECUTIVE SUMMARY

Falcon Vision Fund I is a portfolio of late-stage private companies in artificial intelligence, defense autonomy, robotics, and aerospace. Each holding is a category leader still in private hands, at the point when access is scarce and a public listing has not yet reset who owns the business. The mandate is direct ownership of those companies — not a fund of funds, and not a basket of public proxies for the same themes.

KEY TERMS

FUND NAME Falcon Vision Fund I	FUND CAP \$50M	MINIMUM INVESTMENT \$250,000 / investor
PERMITTED ACCOUNTS Taxable, Qualified (IRA and Roth IRA)	CUSTODIANS Schwab, Fidelity	TAX REPORTING Consolidated K-1
TARGET COMPOSITION 6–10 growth-stage companies mirroring leading venture themes with optimized fee economics.	SOURCING CHANNELS Direct secondaries, tender participation, primary rounds, and strategic warehousing where available.	CORE FOCUS Scaled revenue, clear path to public liquidity, and institutional-grade governance.

SHARE CLASSES

	MANAGEMENT FEE	CARRIED INTEREST
CLASS A EXISTING FALCON CLIENTS	0.00%	10.00%
CLASS B NON-FALCON INVESTORS	2.00% ANNUAL	15.00%

QUALIFIED CLIENTS \$1.4 million in assets under management with Falcon or a net worth exceeding \$2.7 million (excluding primary residence).

TARGET PORTFOLIO ALLOCATIONS

Concentrated book of 10 late-stage holdings, ordered by target weight.
Weights flex with availability, pricing, and deal structure.

HOLDING 01 OF 10 · DATA INTELLIGENCE · ENTERPRISE AI

DATABRICKS

Conviction Data / AI Platform

TARGET WEIGHT

19%

The data-and-AI operating layer for the enterprise — lakehouse architecture that unifies analytics, governance, and production AI on open data across every major cloud.

INVESTMENT THESIS

- 01 The system of record for enterprise AI**
Already sits on the customer's data estate, so AI products convert existing consumption — no rip-and-replace.
- 02 Public-market comparable, still private**
\$7B+ of annual recurring revenue, ~80% growth, 140%+ NDR — a Snowflake-class franchise re-rated to ~\$190B.
- 03 Highest-conviction weight in the book**
The Fund's 19% core compounder: scaled, cash-generative, and the cleanest expression of production AI.

VALUATION

\$188–190B

2025 REVENUE

\$4.8B

YOY REVENUE GROWTH

HOLDING 02 OF 10 · DEFENSE AUTONOMY · DUAL-USE HARDWARE

ANDURIL

Defense Autonomy & Hardware Standard

TARGET WEIGHT

14%

The software-defined defense company the primes were never structured to become. Lattice — its command-and-control software — sits on finished product and \$2.2B of 2025 revenue.

INVESTMENT THESIS

01 Category standard for autonomous defense

Once Lattice, Anduril's command software, runs the mission, replacing it is as hard as replacing an operating system.

02 Re-rating of the defense-tech complex

Series H at \$61B doubled the June 2025 mark. The multiple is venture; the backlog is sovereign.

03 Aligned with the Fund's defense sleeve

Anduril is the 14% autonomy standard in the defense sleeve — software that becomes the system of record once it is on the mission.

VALUATION

\$61B

2025 REVENUE

\$2.2B

YOY REVENUE GROWTH

+120%

HOLDING 03 OF 10 · PAYMENTS · FINANCIAL INFRASTRUCTURE

STRIPE

Fintech Infrastructure & Payments Leader

TARGET WEIGHT

12%

The financial operating system of the internet — the default way software companies collect, route, and reconcile money, now expanding into the metered economics of AI.

INVESTMENT THESIS

01 Tollbooth on digital commerce

Every new software business that charges a customer is a potential Stripe merchant — \$1.9T of total payment volume in 2025.

02 AI becomes a payments problem

Token billing, Metronome, and OpenRouter put Stripe on both sides of AI economics.

03 Liquidity without waiting for an IPO

Institutional tenders provide access now, with a cash-rich issuer and a deep public buyer universe later.

VALUATION

\$159B

2025 REVENUE

\$6.8B

YOY REVENUE GROWTH

+33%

HOLDING 04 OF 10 · NEOCLOUD · AI INFRASTRUCTURE

LAMBDA

AI Cloud & GPU Infrastructure

TARGET WEIGHT

10%

A neocloud that buys Nvidia graphics processing units (GPUs) and rents them to labs and hyperscalers — including a multi-billion-dollar capacity agreement with Microsoft.

INVESTMENT THESIS

01 The pick-and-shovel beside the labs

Training and inference demand still outruns owned capacity. Lambda sells the cluster, not the model.

02 Contracted demand, not a speculative fleet

Microsoft expanded a multi-billion-dollar GPU agreement in November 2025. Debt facilities in 2026 fund chips already spoken for.

03 A public-market path is in view

The last priced round was \$1.5 billion at a \$5.4 billion post-money mark. Reported pre-IPO talks would be the next re-rating, not the underwriting case.

VALUATION

\$5.4B

2025 REVENUE

\$760M

YOY REVENUE GROWTH

+79%

HOLDING 05 OF 10 · MARITIME AUTONOMY · DEFENSE

SARONIC

Autonomous Shipbuilding

TARGET WEIGHT

9%

Builds autonomous surface vessels in American yards — from the 24-foot Corsair to the 180-foot Marauder — and sells them as a production line, not a prototype.

INVESTMENT THESIS

01 Shipbuilding is the scarce asset

Autonomy software is replicable. A yard that launches hulls in under a year is not. Saronic bought the industrial problem.

02 A program, not a demo

The U.S. Navy's \$392 million Corsair production contract is the proof that the small boat is already a program of record.

03 Re-rated with the defense complex

Series D raised \$1.75 billion at \$9.25 billion, more than double the \$4 billion Series C a year earlier.

VALUATION

\$9.25B

2025 REVENUE

\$200M

YOY REVENUE GROWTH

+1,500%

HOLDING 06 OF 10 · DEFENSE AUTONOMY · AIRCRAFT

SHIELD AI

Drone Defense Technology

TARGET WEIGHT

8%

Hivemind is the autonomy stack that flies aircraft when GPS and the data link are gone. V-BAT is the airframe. The U.S. Air Force Collaborative Combat Aircraft program is the customer.

INVESTMENT THESIS

01 Autonomy that works when the sky is jammed

Hivemind is built for denied navigation. That is the requirement, not a feature, on a modern battlefield.

02 Selected onto the Air Force's drone wingman

Hivemind was named a Collaborative Combat Aircraft autonomy provider in February 2026 — the program that pairs drones with crewed fighters.

03 A full turn of the valuation in a year

Series G raised \$1.5 billion at a \$12.7 billion post-money mark, about 140% above the March 2025 round.

VALUATION

\$12.7B

2025 REVENUE

\$300M

YOY REVENUE GROWTH

+12%

HOLDING 07 OF 10 · AI CLOUD · ENERGY INFRASTRUCTURE

CRUSOE

Climate-Aligned AI Infrastructure Power

TARGET WEIGHT

8%

Turns stranded and underused energy into AI compute for OpenAI, Microsoft, Meta, and Oracle — including a \$13B contract for graphics processing units (GPUs) with Jane Street.

INVESTMENT THESIS

01 Own the bottleneck

Labs can buy graphics processing units. They cannot conjure megawatts, interconnect, and permitted campuses on a two-year clock.

02 Hyperscaler-grade counterparties

OpenAI, Microsoft, Meta, and Jane Street are not a science project. The 2026 round is 3× the 2025 mark.

03 Climate alignment without a concession

Flared and stranded energy is a permitting advantage and an ESG-eligible sleeve for AI infrastructure.

+81%

HOLDING 08 OF 10 · HUMANOID ROBOTICS · PHYSICAL AI

FIGURE AI

Autonomous Humanoid Robotics

TARGET WEIGHT

7%

A general-purpose humanoid and Helix, the vision-language-action (VLA) model that pilots it. Figure 02 spent 11 months in BMW's Spartanburg plant building more than 30,000 X3s — BMW's compact sport-utility vehicle.

INVESTMENT THESIS

01 The form factor that fits the world as built

Factories, warehouses, and homes were designed for humans. A humanoid that uses existing aisles can sell into a larger total addressable market.

02 Helix is the software company inside

Owning the vision-language-action model — rather than renting it — is the difference between a contract manufacturer and a platform.

03 Sized for convexity, not concentration

At a 7% portfolio allocation, this is the option on physical AGI. BMW is the de-risking event, not the end state.

HOLDING 09 OF 10 · SEMICONDUCTORS · PHOTONICS

LIGHTMATTER

Photonic Interconnect for AI

TARGET WEIGHT

7%

Replaces copper between AI chips with light. Passage is a photonic interconnect — an interposer and near-package optics — so GPU clusters can scale without the power and fiber tax of electrical links.

INVESTMENT THESIS

01 The next bottleneck is the wire

Graphics processing units are no longer the only scarce part. Bandwidth and watts between them decide how large a training cluster can get.

02 Passage is a standard, not a science project

The L20 module joins the Open CPX ecosystem: bidirectional optics that cut fiber count roughly in half on a large GPU pod.

03 Sized as the semiconductor option

At 7%, Lightmatter is the book's bet that photonics becomes the default interconnect before these companies are public.

HOLDING 10 OF 10 · EVENT CONTRACTS · MARKET INFRASTRUCTURE

KALSHI

Regulated Prediction Markets

TARGET WEIGHT

6%

The first U.S. exchange overseen by the Commodity Futures Trading Commission where anyone can trade an event — elections, the economy, weather, and sports. That 2021 license is the moat.

INVESTMENT THESIS

01 A new exchange, not a new app

A regulated derivatives exchange compounds like the Chicago Mercantile Exchange. The license to run it is the barrier.

02 Distribution is already built

Robinhood routing and a CNN partnership mean Kalshi does not have to buy its way into the mass market.

03 Asymmetric regulatory asset

A multi-year head start under the Commodity Futures Trading Commission is the position to own if event contracts stay federal derivatives.

RAMP

AI-Native Corporate Finance Platform

STATUS
WATCH

The AI finance operating system for 70,000 businesses — cards, bill pay, procurement, accounting, and the expense CFOs did not budget: tokens.

INVESTMENT THESIS

- 01 The system of record for how companies spend**
Once Ramp sees every swipe, invoice, and vendor, it becomes the default place to apply policy and AI.
- 02 AI spend is the new T&E**
Tokens are a budget line with no incumbent owner. Ramp is building the controls CFOs now need.
- 03 Profitable growth at venture scale**
Free-cash-flow positive above \$1B of revenue, with 170% growth in total payment volume, is a public-quality print.

WATCH LIST · DEFENSE INDUSTRIAL · PHYSICAL AI

HADRIAN

Advanced Defense Manufacturing

STATUS

WATCH

The factories America forgot how to build — AI, robotics, and the Opus operating system turning automation into design-agnostic production for munitions, aerostructures, and Navy work.

INVESTMENT THESIS

01 The pick-and-shovel of rearmament

Primes can design. They cannot produce at the required tempo. Hadrian sells factories-as-a-service.

02 Software margins on a hardware base

Opus is the control software. Each new factory raises switching costs without Hadrian becoming an original equipment manufacturer.

03 Complement, not overlap, with Anduril

Anduril designs autonomy. Hadrian machines the physical world those systems require.

WATCH LIST · INFERENCE SILICON · SYSTEMS

POSITRON AI

AI Inference Hardware Acceleration

STATUS

WATCH

Inference computers that skip the wait for high-bandwidth memory. Atlas is already installed — more than 50 server racks at Oracle Cloud, a production deployment at a major cloud, not a lab demo.

INVESTMENT THESIS

01 Inference is where the bill lives

Training is occasional; answering users is the permanent cost. The design avoids shortages of high-bandwidth memory (HBM) and chip-on-wafer-on-substrate (CoWoS) packaging, the step that bonds that memory to the chip.

02 Shipped, not slidecked

Atlas has been in customer hands since 2024. The \$875M Series C at \$5B funds tapeout, not a science experiment.

03 Sovereign silicon in a defense-aware book

U.S. design and assembly is a feature alongside Anduril and Hadrian — dual-use with a commercial first customer.
